

# Education Path in DC

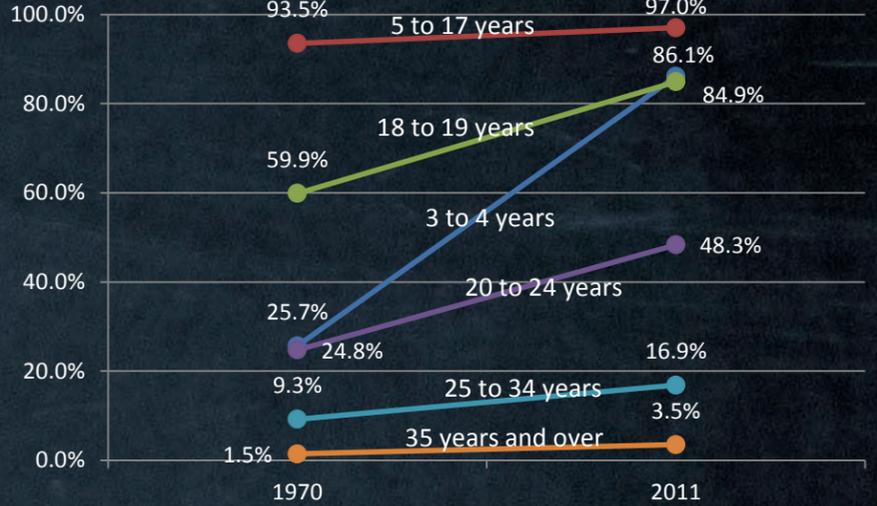

Education plays a fundamental role in American society. Here we take a look at school enrollment, costs, and educational outcomes in the District of Columbia. How does school enrollment today compare with 1970, when the baby boom generation was in its prime years of school attendance (age 6 to 24) and made up 90 percent of all students enrolled in school nationally? The American Community Survey (ACS) and other Census Bureau surveys provide us with the information to answer these and other valuable questions. Education statistics are vital to communities in determining funding allocations and guiding program planning.

**Total Enrollment: 1970 and 2011**
